DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 – 18 & 22 – 34, drawn to a method and apparatus for sequencing molecules of a polymer, classified in class 702, subclass 27.
- II. Claims 19 – 21, drawn to a method for identifying a characteristic electrical signal of a chemically known molecule, classified in class 436, subclass 149.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions. For example, invention I is directed to a method and apparatus for sequencing molecules of a polymer. Whereas, invention II is directed to a method for identifying a characteristic electrical signal of a chemically known molecule.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
